Re: Application for Digital Transformation Specialist, Ref. JR4434 (Grade 4, three-year project contract)

Dear Members of the Selection Panel,

I am applying for the Digital Transformation Specialist post (JR4434) within the Operations Management Team's Change & Engagement function. For more than thirteen years I have done, day to day, much of what this role describes: turning complex subject-matter knowledge into clear, accurate, accessible guidance; keeping documentation and knowledge repositories current and well organised; coordinating subject matter experts, technical teams and end users through platform and process change; and — most importantly — helping colleagues actually adopt new systems and new ways of working.

At [Organisation] I coordinated the move from [old system] to [new platform] for [N] users: mapping the workflow, identifying impacts and risks, writing the user guides and SOPs, recording short how-to videos, and planning the communications and training delivered ahead of go-live. Adoption reached [X]% within [N] weeks, and the remaining support queries were analysed and fed back into the guidance. That is close to the ERP transformation work in the vacancy — supporting the Change Manager with impact assessments, stakeholder mapping and business readiness, and acting as the coordination point between SMEs, change managers and end users. I have also authored and maintained editorial style guides, SOPs and onboarding material under a scheduled review cycle, and rebuilt our central content repository — taxonomy, naming conventions, permissions and version control — so colleagues find one current version rather than several competing ones. Maintaining Workday Help content and a central repository of user documentation is therefore work I have done at scale, and I know how quickly documentation loses trust when it falls out of date.

My background is journalism, so writing for different audiences — a first-time end user or a senior stakeholder — is my core craft, as are managing several concurrent projects against fixed deadlines and keeping everyone informed. Thirteen years of research, verification and quality control have also given me a strongly analytical habit: gather the evidence, check it, find where the process fails, and make a data-driven recommendation.

On Workday HCM specifically, I am transparent: my hands-on experience to date is with [content management systems and enterprise collaboration platforms] rather than Workday, plus [any HRIS/ERP end-user experience — delete if none]. What I can offer is a proven ability to learn an enterprise system quickly, become the person colleagues ask for help, and then document and teach it to others. I have begun familiarising myself with Workday HCM's structure and with how Workday Help content is organised, and I would welcome the chance to build hands-on proficiency within your team.

The chance to support digital transformation at an institute whose open biological data and tools underpin research worldwide is exactly the public-purpose work I want the next stage of my career to serve. My degree in Mass Communication & Journalism, with thirteen years of international-facing editorial and digital work, fits the related-discipline profile for this post, and I am fully prepared to relocate to Hinxton for the three-year project.

Thank you for considering my application. My CV is enclosed; writing samples, documentation examples and references are available on request. I would welcome the opportunity to discuss how my change, content and coordination experience can support the Operations Management Team and EMBL-EBI's ERP transformation.

Yours sincerely,  
Liladhar Koirala
